PEAKfresh Produce Bags

July 2008 Gourmet Retailer NSFT Show Tips

PEAKfresh produce bags slow down the natural aging process of fruit and vegetables, preserving both the freshness and the life of your produce. They remove ethylene gas to prolong the life and freshness of the produce. Most fruit and vegetables release ethylene gas after harvest. Exposure to the gas accelerates aging in fruit and vegetables. Unlike ordinary plastic bags, PEAKfresh produce bags 'breathe' so that the damaging gases produced by the fresh produce are removed. PEAKfresh produce bags minimize moisture formation and inhibit bacteria growth, helping to maintain fruit and vegetables at their peak.

PEAKfresh produce bags are reusable up to two months, washing and drying thoroughly between uses.

Each PEAKfresh produce bag measures 12" x 16" with an SRP \$5.99. Available in July 2008
